**Velocity:**

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\textit{sprint duration}}{\textit{velocity}} = \frac{20}{10} = 2$$

### Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

### To view the epic burndown chart:

- 1.Navigate to your scrum project..
- 2.Select the **Backlog** .
- 3.Click **Reports**, then select **Epic Burndown**..
4. Select an epic from the dropdown next to the **Epic Burndown** header.

You'll be able to choose from epics that are in projects configured for your board, via the board's filter.
